

BACK-BONE

The Back-Bone RX0 is a **professional upgrade** of the Sony DSC-RX0 premium compact camera that now enables users to fit a wide range of **MFT or C-mount lenses**. Other lenses can also be fitted by using optional adapters.

The Sony DSC-RX0 is a feature rich premium compact camera that includes Sony's BIONZ X image processing engine for more natural details, richer tonal graduations, lower noise and more realism. The large 1" sensor captures great images at speeds up to 1,000 fps and at shutter speeds up to 1/32000 sec.

It is an established tool used in a wide range of Film & TV Production which can now be utilised for compact multi camera 360VR and timeslice (bullet time) applications when used with the Sony CCB-WD1 wired control box.
